Final Project Milestone

We have not yet reached a fully functional baseline model for our abstractive summarizer. We've established the design of our baseline and extended models, defined our dataset, and determined how we will evaluate the performance of our models. We're currently far along in the process of implementing our baseline model, but we do not yet have testable code. However, we have used the Azure GPU to train word2vec skip-gram vectors on the Gigaword corpus.
